TASKI The ULTIMATE Cleaning Machines

TASKI ULTIMAXX

ULTIMAXX HEPA Filters

Air quality matters, with ULTIMAXX HEPA Filters we can all breathe easier.

ULTIMAXX scrubber driers are fitted with HEPA Filters to deliver a whole new level of ultimate hygiene

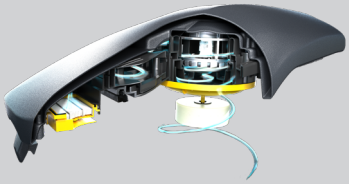
What is HEPA?

HEPA filters (High Efficiency Particulate Air Filters) can be relied on to capture tiny particles and pollutants such as pollen, even microorganisms such as bacterial and fungal spores. Critical for healthcare environments or high density public spaces.
HEPA filters are now available for floor cleaning using TASKI ULTIMAXX scrubber driers. When you choose ULTIMAXX HEPA H13 Filters you can be assured the air is reliably filtered removing 99.95% of all particles larger than 0.3 µm (micron).

Why upgrade to ULTIMAXX HEPA?

HEPA Filters are perfect for superior indoor air quality (IAQ) in hospitals, long term care, hotels, high density offices and any space where IAQ is important. In industries such as healthcare, IAQ is a well-known issue but more sectors and individual businesses are evaluating their IAQ for both guests and employees. Many of us suffer from hay fever in summer but for some individuals, poor IAQ can radically affect their quality of life. Moving to HEPA Filters is a small, low cost upgrade which makes a big difference to IAQ.

But ULTIMAXX goes further….



Whisper vacuum motors

The patented Whisper digital motors create exceptional suction to draw all soilage and contaminants away from surfaces and safely into its large recovery tanks. Whisper brushless digital motors radically reduce carbon dust emissions as well as having a very small carbon footprint. They require next to no maintenance and have extended longevity.

Direct suction

Smart direct routing harnesses the powerful suction created by Whisper motors to ensure no holding spaces are given where microorganisms can thrive. Excessively long hoses with tight bends on competitor machines are notorious breeding spaces for microorganisms.

IntelliBac tanks

ULTIMAXX recovery tanks are made with special antibacterial material to suppress microorganisms. ULTIMAXX tanks are bigger and easier to access. If it's easier to access and clean, higher hygiene standards can be achieved. For the ultimate in confidence use Diversey's Oxivir to disinfect tanks.

HEPA Filter replacement best practice.
TASKI recommend under normal conditions to change the HEPA filter at intervals of a minimum of once every 100 tank fills or 6 months, whichever is soonest. Disinfect with Oxivir for peace of mind.

Now more than ever your work environment needs to be cleaned to the highest hygiene and safety standards.
Contact your Diversey representative to discuss upgrading your air quality so you can make your environment cleaner, more hygienic and much safer for you and your colleagues.

No compromises. ULTIMAXX gives you the ultimate in hygiene.
